

Environmental policy on Zarautz beach

The Zarautz town hall, as a public body with a local remit, is well aware of the importance of respecting the environment and conserving our natural resources. For this reason, and with the objective of carrying out our activities in such a way that they contribute to the sustainable development of local society, we commit ourselves to the improvement of our environmental performance with regards to Zarautz beach, which after all is the star natural attraction of our town.

Zarauz town hall's commitment about the beach can be summarised along the following lines:

- Ensure that all environmental requirements and regulations are followed at all times.
- Establish targets and provide the necessary resources to meet those targets, which will be periodically revised and updated by the relevant department, to ensure continual improvement in our environmental performance and the prevention of pollution.
- Environmental issues will be fully integrated into the day-to-day work of the town hall, being regarded as an important factor for the long-term general improvement of the town hall, thus reducing the environmental impact of its activities.
- Aim to save natural resources through the quality and efficiency of our actions, minimizing the use of said resources by using the most eco-friendly methods.
- Aim for the involvement and participation of those who use the beach through promoting awareness, a key part of improving our environmental performance about the beach.
- Establish appropriate training and awareness plans which will ensure that town hall employees, and relevant subcontractors, are well informed of the policies, aims and obligations of our organisation. Establish the principle of responsibility, so that all our employees and contractors take responsibility for all and any environmental issues, which occur in their day-to-day work routines. This environmental policy will apply to all activities, products and services on Zarautz beach in any and all situations.
